

Barrel Clamp

Barrel Clamps - Known as "Barrel Clamp", this hydraulic accessory is actually used on forklifts to squeeze items which you want to transport with the lift truck. Usually, they're used so as to paper rolls, barrels, and handle kegs, with a few barrel clamp designs being able to revolve the cargo. Like for instance, the revolving function allows the person operating the forklift to be able to slot in a vertically stored paper into the horizontal intake of a printing press.
