

Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings which are utilized on lift masts to be able to help them perform in challenging environmental conditions. Lift masts are normally subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is often exposed to environmental influences like for instance dust, cold, heat, contamination, aggressive ambient air and moisture. Therefore, the guidance arrangements of lift masts need to be particularly strong and have a particular high load carrying capability.

In order to help compete in numerous various environmental surroundings, carriage rollers were designed for various lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
